2 ERP

Support your business infrastructure with scalable software that improves key facets of your enterprise. Get access to our industry-specific knowledge to design, build, and scale your new enterprise software solution.

Case Study

eTeleHealth Application

About the Client:

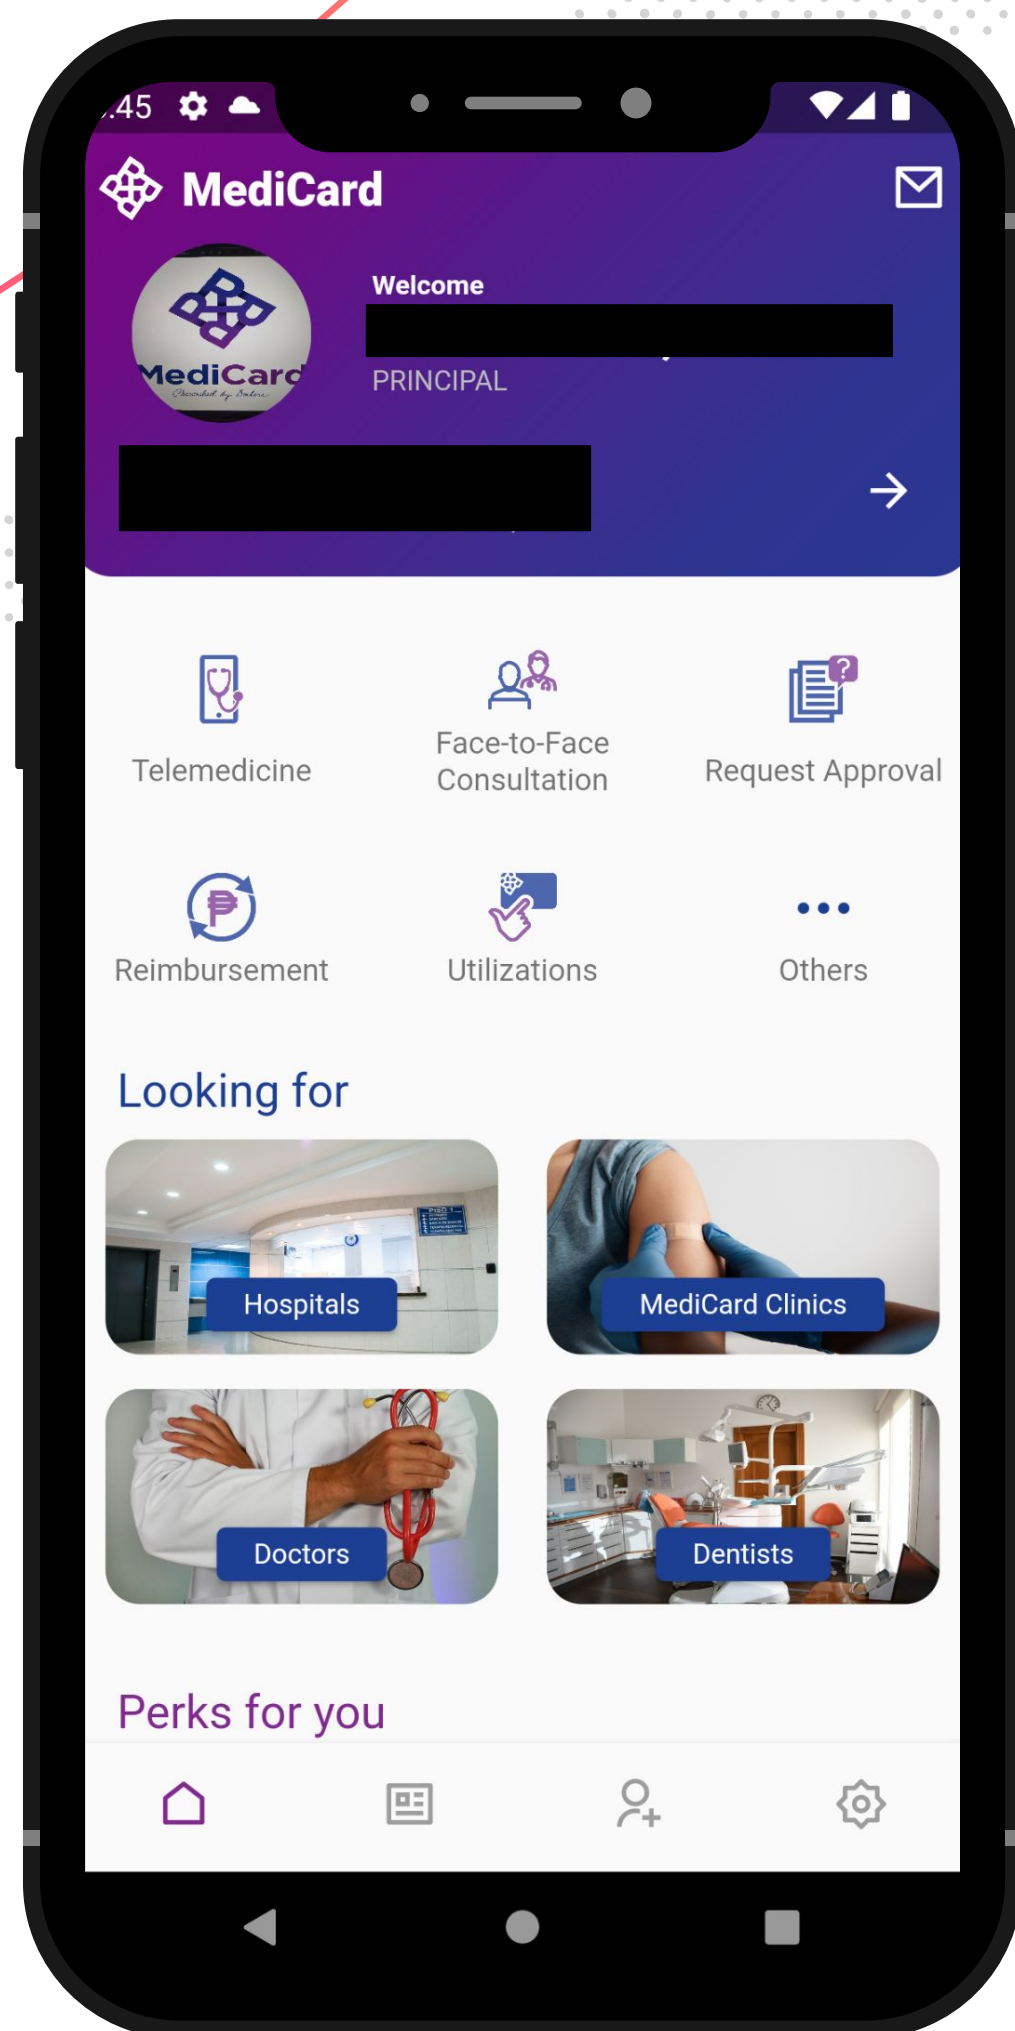

- The client is a Philippines-based company.
- The company works around providing healthcare services for individuals as well as organizations.
- They are the only HMO(Health Maintenance Organization) founded and managed by doctors.

Business Requirement:

- Better UI/UX of the mobile application.
- Breaking the traditional way of filling up forms on paper by providing the requests to be submitted through the mobile application itself
- Provide visibility to the users about their appointments/tests results/lab results/ and generating bills.

Solution:

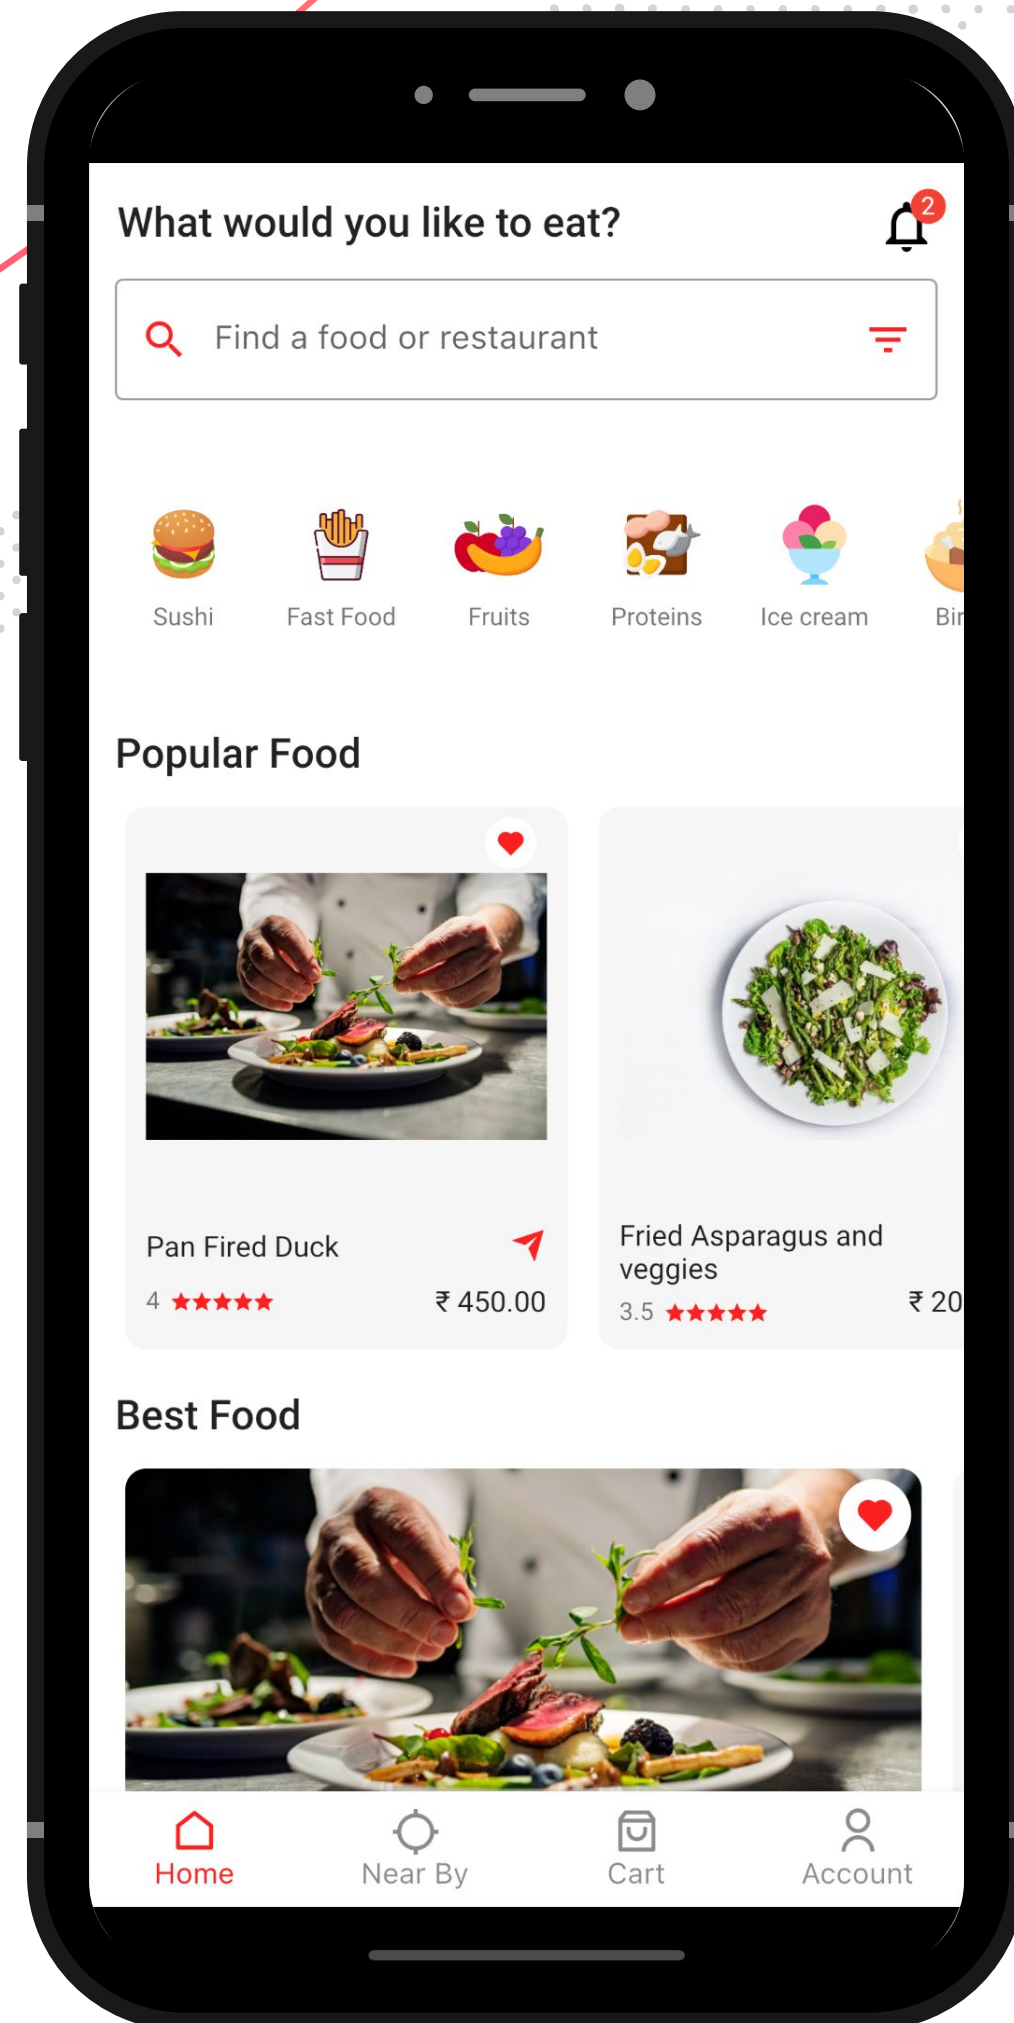

- Provided a solution for performance by adapting to new and improved methodologies to get efficient results in terms of cost and speed
- Shifted the application to Flutter, which provides cross-platform accessibility using a single code-base over the native platform specific code-base and development tools
- Verifying form data on the user side for providing a faster and smooth user experience
- Viewing information about your health plan becomes easier with new and improved mobile application
- Register your dependents in the app with just a few clicks
- Generate your QR code for easy accessibility
- Request approval of face-to-face consultation
- Setting up an online consultation with doctors through the in-app chat feature
- Requesting approvals for lab/diagnostic tests made simple through the application
- Requesting appointments for Rapid Antibody Testing(in regard to COVID-19)
- View your maternity benefits compiled alongside your profile information
- View your utilization (and your dependents' utilization, with consent)
- View your reimbursements and keep a track of the status of the request
- Search for accredited dentists, doctors and clinics/hospitals
- View MediCard Perks such as offers, or discounts on Lifestyle, Food, and Hotels, etc.

Bouffage - A Restaurant Application

13

Technineur Solution:

- Chain of restaurants in various parts of the city.
- Cloud kitchen linked with swiggy, zomato and other delivery partners.
- Home delivery in selected restaurants.
- Food court concept - multi stall concept.

Business Requirement:

- Lack of proper kitchen management system.
- Reliance on manforce to handle large number of customers.
- Lack of proper tracking and tracing of order details.
- Contact menu - Risk for covid and sanitation.
- Multiple applications for keeping track of inventory, kitchen, seat management and billing.

Solution:

Reserve in 2 easy steps

- Select the “Dine In” option.Punch-in the reservation requirement.
- Wait for the restaurant to accept your reservation.Once accepted the restaurant confirms the reservation and allots a table for the user. An instant booking confirmation will be sent to you on the app as notification

Dine in 3 easy steps

- Arrive at the restaurant on time and show the Table Reservation Confirmation sent by the Restaurant digitally
- Order any food items from the menu .
- Pay for the bill with UPI Payments from the app or Cash On Delivery

USP of the Application is anyone can pay on behalf of anyone. If a team of employees of an organisation dine out ,the expense can be paid by the management from with the app thus avoiding receipt submission and unwanted glitch in payment .

This application is designed for handling restaurant table reservations.

Based on table availability for the requested time staff can accept the reservations and send notifications to the Users.

Once the customer visits the restaurant they can show the digital confirmation received from the restaurant and the table will be allotted to this customer after this.

The application makes the life of waiters, managers, cooks and owners easier.

Orders of customers can be taken in seconds. The kitchen receive the orders as soon as the manager takes them. The app is recommended for any restaurant who doesn't want to fumble around with pen and paper.

Item by item order status update is available.

User notification is sent when the order is confirmed/in progress/completed.

Product Case Study

EduFloor - Student Networking

In House Product for usage at various schools and colleges

Problems:

- No proper communication amongst peers due to virtual classes.
- Notes and content once discussed is lost in the various whatsapp groups/mail chains.
- Assignments are emailed to the professor, due to which at times, the emails are either sent to spam, or might get lost.
- Exams are skipped or difficulty in conducting online exams as all questions are marked equally.
- Too many links to join, making the student confused on which url to click for each class.
- Lack of proper goal setting and career motivation.
- Lack of a platform to showcase educational achievements and honors to fellow peers and maintain records of the same.

Solution:

EduFloor is designed to provide an additional edge to Schools, Colleges, Universities and students.

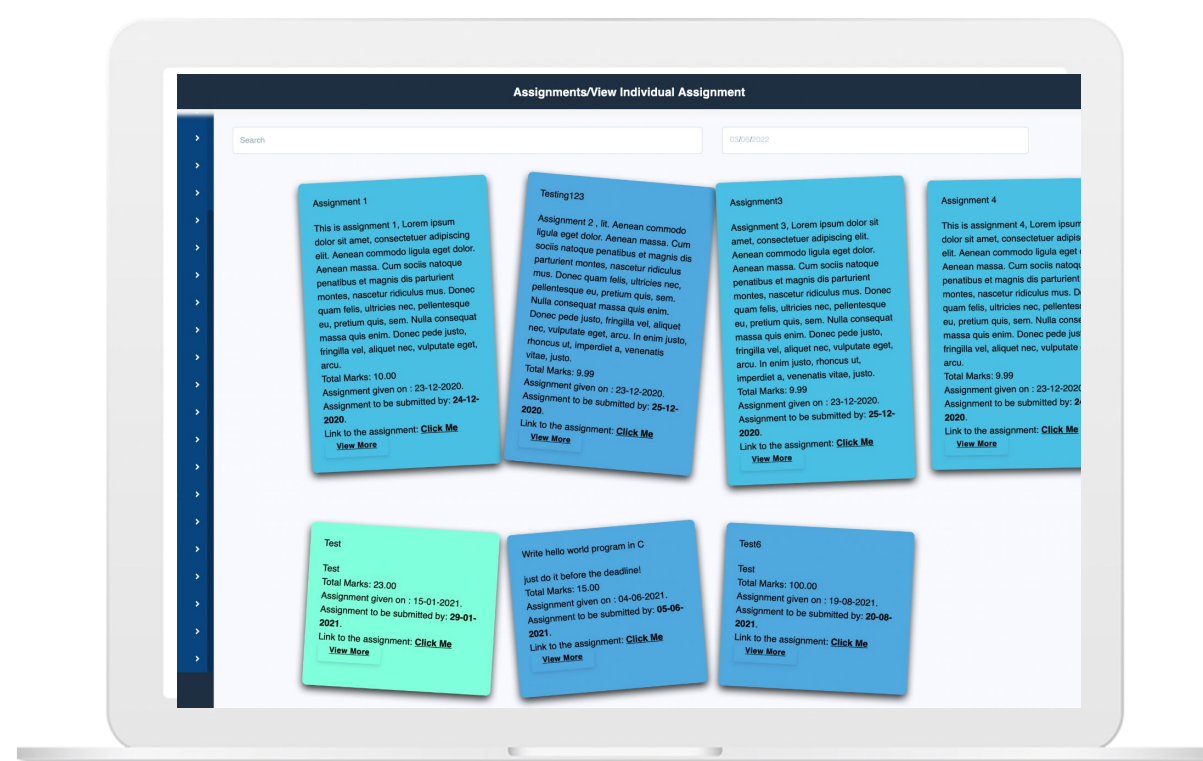

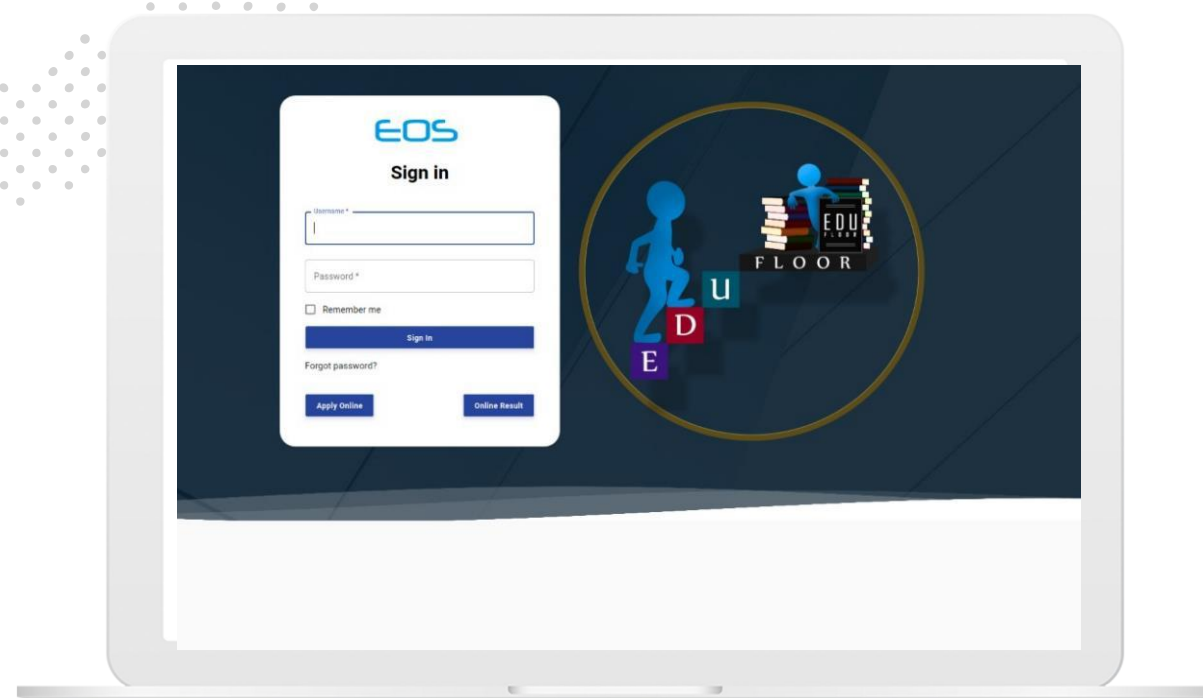

Designed and developed to get the institution under Smart campus for better tracking and growth, the application is developed using Web services which can be used for any integration with other systems or applications.

Students can use this application as a social networking site to talk to other peers and also keep a track of their educational requirements like assignments, group projects, attendance, and so on. Also, faculty can upload material directly into the system, and this information can be built in years which can be used for reference and research in future.

Improve the level of communication between colleges, faculty and students. View and participate in all the events, activities and assignment happening in the academy / university. Closed room application for students and faculty. Messaging, Image upload, pictures upload and other features sharing between students and academy.

Dynamic time table with one click solution to join classes rather than the hassle with multiple links.

Student can also share their achievements and maintain blogs, which can be later exposed to various other sources for interviews, assessments , or downloaded as a resume.
